- Ordering Information

Offline version available for download at <u>www.dewaltdesignassist.com</u>.

DEWALT developed the DEWALT Design Assist (DDA) anchor software to enable users to input technical data into a dynamic model environment-to visualize, consider, and specify anchors in today's changing engineering climate.

For a demonstration of the latest version of PDA, contact us at <u>anchors@DEWALT.com</u>

# **GENERAL INFORMATION**

# ultracon®+

Concrete Screw Anchor

#### **PRODUCT DESCRIPTION**

The UltraCon+ fastening system is a complete family of screw anchors for light to medium duty applications in concrete, masonry block, brick, and wood base materials. The UltraCon+ is fast and easy to install and provides a neat, finished appearance. The UltraCon+ screw anchor is engineered with matched tolerance drill bits and installation tools designed to meet the needs of the user and also provide optimum performance. The UltraCon+ features a gimlet point for selfdrilling into wood base materials without pre-drilling.

The UltraCon+ screw anchor is available in carbon steel with a Stalgard coating in several colors. Head styles include a slotted hex washer head, Phillips flat head, Phillips Trimfit flat head and Hex flange head.

#### **GENERAL APPLICATIONS AND USES**

- · Window and door frames
- · Shutters and guards
- Lighting fixtures

- FEATURES AND BENEFITS
- + Available in several head styles
- + Several colors and finishes to match application
- + Removable (reusable in wood)
- + Gimlet point for self drilling into wood
- **APPROVALS AND LISTINGS**
- International Code Council, Evaluation Service (ICC-ES), ESR-3068 for uncracked concrete, ESR-3196 for masonry, ESR-3042 for wood, and ESR-3213 for chemically treated lumber
- Code compliant with the International Building Code/International Residential Code: 2021 IBC/IRC, 2018 IBC/IRC, 2015 IBC/IRC, and 2012 IBC/IRC
- Tested in accordance with ACI ACI 355.2/ASTM E488 and ICC-ES AC193 for use in concrete, ICC-ES AC106 for use in masonry, ICC-ES AC233 for use in wood, and ICC-ES AC257 for use in pressure treated lumber
- Evaluated and qualified by an accredited independent testing laboratory for reliability against brittle failure, e.g. hydrogen embrittlement
- City of Los Angeles, LABC and LARC Supplement (within ICC-ES evaluation reports)
- Miami-Dade County Notice of Acceptance (NOA) No. 21-0113.01
- Florida Statewide Approval FL29080

#### **GUIDE SPECIFICATIONS**

CSI Divisions: 03 16 00 - Concrete Anchors. 04 05 19.16 - Masonry Anchors. 05 05 19 -Post-Installed Concrete Anchors and 06 05 23 - Wood, Plastic, and Composite Fastenings. Concrete Screw Anchors shall be UltraCon+ anchors as supplied by DEWALT, Towson, MD.

Washer O.D., (in.)	39/64"

1. For minimum nominal embedment depths, hnom, see the performance data tables. The minimum hole depth, ho, is 1/4-inch more than the selected nominal embedment depth.

2. In light gauge steel material (0.036 / 20 gauge and thinner), the clearance hole can be the same diameter as the drill bit.

3. Pre-drilling is not required for UltraCon+ screw anchors into wood base materials (but can be considered).

# **INSTALLATION INSTRUCTIONS**

Hex Head

#### Installation Instruction for UltraCon+

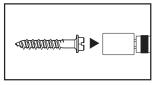

Step 1 Using the proper drill bit size, drill a hole into the base material to the required depth, h<sub>o</sub>, which is a 1/4-inch deeper than the minimum embedment depth, h<sub>nom</sub>.

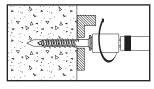

#### Step 2

Remove dust and debris from the hole during drilling (e.g. dust extractor) or following drilling (e.g. suction, forced air) to extract loose particles created by drilling.

#### Step 3

Attach a UltraCon+ installation socket tool for the selected anchor size to a percussion drill and set the drill to rotary only mode. Mount the screw anchor head into the socket. For flat head versions a bit tip must be used with the socket tool.

#### Step 4

Place the point of the UltraCon+ through the fixture into the pre-drilled hole and drive the anchor in one steady continuous motion until it is fully seated at the proper embedment. The driver will automatically disengage from the head of the screw anchor.

1. Tabulated Ultimate load values are for anchors installed in uncracked concrete. Concrete compressive strength must be at the specified minimum at the time of installation.

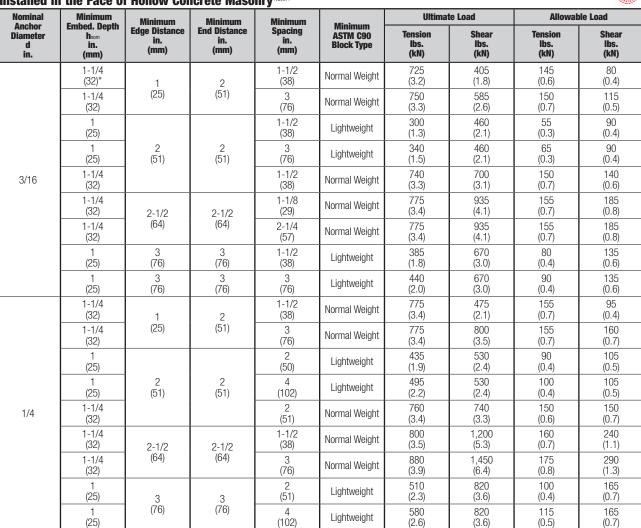

2. Allowable load capacities listed are calculated using an applied safety factor of 4.0. Consideration of safety factors of 10 or higher may be necessary depending on the application, such as life safety or overhead.

3. Linear interpolation may be used to determine allowable loads for intermediate compressive strengths.

4. For lightweight concrete multiply tabulated allowable load values by a reduction factor of 0.60.

#### Ultimate and Allowable Load Capacities for UltraCon+ Anchors Installed in the Face of Hollow Concrete Masonry<sup>1,2,3,4</sup>

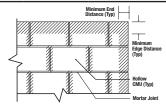

1. Tabulated load values are for anchors installed in minimum 8-inch-wide, Type II, light weight or normal weight concrete masonry units conforming to ASTM C90 that have reached the minimum designated ultimate compressive strength at the time of installation (f'm ≥ 2,000 psi). Mortar must be Grade N,S or M..

2. Allowable load capacities listed are calculated using an applied safety factor of 5.0. Consideration of safety factors of 10 or higher may be necessary depending on the application, such as life safety or overhead.

3. Allowable shear loads into the face shell of a masonry wall may be applied in any direction.

4. The tabulated values are applicable for anchors installed into the ends of concrete masonry units (e.g. wall opening) where minimum edge distances are maintained

Minimum Edg

#### Ultimate and Allowable Load Capacities for UltraCon+ Anchors Installed into the Tops of Grout Filled Concrete Masonry Walls<sup>1,2,3</sup> Minimum Nominal Minimum Minimum

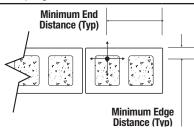

Anchor Diameter d in.	Embed. hnom in. (mm)	Edge Distance in. (mm)	End Distance in. (mm)	Minimum ASTM C90 Block Type	Tension Ibs (kN)	Shear Ibs (kN)	Tension Ibs (kN)	Shear Ibs (kN)
3/16	1-1/2 (38)	1-1/2 (38)	3 (76)	Lightweight	450 (2.0)	510 (2.3)	90 (0.4)	100 (0.5)
1/4	1-1/2 (38)	1-1/2 (38)	3 (76)	Lightweight	825 (3.7)	780 (3.5)	165 (0.7)	155 (0.7)

1. Tabulated load values are for 3/16-inch and 1/4-inch anchors installed in minimum 6-inch-wide, Type II, light weight concrete masonry units conforming to ASTM C90 that have reached the minimum designated ultimate compressive strength at the time of installation (f'm ≥ 1,500 psi). Mortar must be Grade N, S or M.

2. Allowable load capacities listed are calculated using an applied safety factor of 5.0. Consideration of safety factors of 10 or higher may be necessary depending on the application, such as life safety or overhead

3. The tabulated values are applicable to anchors installed at a critical spacing between anchors of 16 times the anchor diameter.

### Allowable Load Capacities for UltraCon+ Anchors Installed in Clay Brick Masonry<sup>1,2,3,4,5</sup>

Nominal Anchor Diameter d in.	Minimum Embed. h <sub>√</sub> in. (mm)	Minimum Edge Distance in. (mm)	Minimum End Distance in. (mm)	Installation Location	Tension Ibs. (kN)	Shear Ibs. (kN)	
3/16		1-3/4 (45)		Face	380 (1.7)	165 (0.7)	
3/10	1-1/2	2-1/4 (57)	7) 1-3/4 3/4 (45)	Mortar Joint	300 (1.3)	165 (0.8)	_
1 (4	(38)	1-3/4 (45)		Face	605 (2.7)	270 (1.2)	- (III) -
1/4		2-1/4 (57)		Mortar Joint	295 (1.3)	190 (0.8)	le Distance (Tvn)

1. Tabulated load values are for anchors installed in multiple wythe, minimum Grade SW, solid clay brick masonry walls conforming to ASTM C62. Mortar must be Type N, S or M. Masonry compressive strength must be at the specified minimum at the time of installation (f'm  $\geq$  1.500 psi).

2. Allowable load capacities listed are calculated using an applied safety factor of 5.0. Consideration of safety factors of 10 or higher may be necessary depending upon the application such as lifesafety or overhead.

3. Allowable shear loads into the face or mortar joint of the brick masonry wall may be applied in any direction.

4. The tabulated values are applicable for anchors installed at a critical spacing between anchors of 12 times the anchor diameter.

5. The tabulated values are applicable for anchors installed into the ends of masonry walls (e.g. wall opening) where minimum edge

distances are maintained.

### Average Withdrawal Capacity and Average Bending Yield Moment of UltraCon+ in Wood<sup>12</sup>

Nominal Anchor Diameter d	Minimum Embed. h. in.	Minimum Edge Distance in.	Withdrawal Capacity' Ibs. (KN)		
in.	(mm)	(mm)	DFL	SYP	
3/16	1 (25)	1-3/4 (45)	540 (2.4)	-	
3/10	1-1/2 (38)	1-3/4 (45)	820 (3.7)	-	
1/4	1 (25)	1-3/4 (45)	680 (3.0)	260 (1.6)	
1/4	1-1/2 (38)	1-3/4 (45)	1,050 (4.7)	735 (3.3)	
1. Ultimate load capacities are base	(38)		(4.7)	(3.3)	

2. Tests in Douglas-Fir Larch (DFL) with minimum Specific Gravity of 0.42 and tests in Southern Yellow Pine (SYP) with minimum Specific Gravity of 0.55; screws oriented tangential to wood grain.

Reduction factor for pullout strength <sup>3</sup>	$\phi$	-	0.65 (C	ondition B)

**ANCHORS & FASTENERS** 

2. Installation must comply with published instructions and details.

3. All values of  $\phi$  were determined from the load combinations of IBC Section 1605.2, ACI 318 (-19 and -14) Section 5.2 or ACI 318-11 Section 9.2, as applicable. If the load combinations of ACI 318-11 Appendix C are used, the appropriate value of  $\phi$  must be determined in accordance with ACI 318-11 D.4.4. For reinforcement that meets ACI 318 (-19 and -14) Chapter 17 or ACI 318-11 Appendix D, as applicable, requirements for Condition A, see ACI 318 (-19 and -14) 17.3.3 or ACI 318-11 D. 4.3, as applicable, for the appropriate  $\phi$  factor.

4. The UltraCon+ anchor is considered a brittle steel element as defined by ACI 318-14 2.3 or ACI 318-11 D.1, as applicable.

5. For all design cases use  $\Psi_{c,N} = 1.0$ . The appropriate effectiveness factor for uncracked concrete (kuncr) must be used.

6. For all design cases use  $\Psi_{c,P} = 1.0$ . For the calculation of  $N_{p,\text{unrer}}$ , the nominal pullout strength can be adjusted by calculation according to:  $N_{pn,rc} = N_{p,\text{unrer}} \left(\frac{f'c}{2,500}\right)^{n}$  (lbs, psi),  $N_{pn,rc} = N_{p,\text{unrer}} \left(\frac{f'c}{17.2}\right)^{n}$  (N,MPa)

Where f'c is the specified concrete compressive strength and whereby the exponent n = 0.3 for the 3/16-inch-diameter anchors, n = 0.4 for 1/4-inch-diameter anchors.

7. Anchors are permitted to be used in lightweight concrete provided the modification factor  $\lambda_n$  equal to 0.8 $\lambda$  is applied to all values of  $\sqrt{1}$  c affecting N<sub>n</sub> and V<sub>n</sub>.  $\lambda$  shall be determined in accordance with the corresponding version of ACI 318.

8. Tabulated values for steel strength in tension must be used for design.

Coefficient for pryout strength	Kcp	-	1.0	1.0
Reduction factor for pryout strength <sup>3</sup>	$\phi$	-	0.70 (Co	ndition B)

For SI: 1 inch = 25.4 mm, 1 lbf = 0, 0044 kN.

1. The data in this table is intended to be used with the design provisions of ACI 318 (-19 and -14) Chapter 17 or ACI 318-11 Appendix D, as applicable.

2. Installation must comply with published instructions and details.

3. All values of  $\phi$  were determined from the load combinations of IBC Section 1605.2, ACI 318 (-19 and -14) Section 5.2 or ACI 318-11 Section 9.2, as applicable. If the load combinations of ACI 318-11 Appendix C are used, the appropriate value of  $\phi$  must be determined in accordance with ACI 318-11 D.4.4. For reinforcement that meets ACI 318-14 Chapter 17 or ACI 318-11 Appendix D, as applicable, requirements for Condition A, see ACI 318-19 17.5.3, ACI 318-14 17.3.3 or ACI 318-11 D. 4.3, as applicable, for the appropriate  $\phi$  factor.

4. The UltraCon+ anchor is considered a brittle steel element as defined by ACI 318 (-19 and -14) 2.3 or ACI 318-11 D.1, as applicable.

Tabulated values for steel strength in shear must be used for design. 5

Anchors are permitted to be used in lightweight concrete provided the modification factor  $\lambda_a$  equal to 0.8 $\lambda$  is applied to all values of  $\sqrt{f}$  c affecting N<sub>a</sub> and V<sub>a</sub>.  $\lambda$  shall be determined in 6. accordance with the corresponding version of ACI 318.

# **DESIGN STRENGTH TABLES (SD)**

📔 - Steel Strength Controls 🛄 - Concrete Breakout Strength Controls 📙 - Anchor Pullout/Pryout Strength Controls

1- Tabular values are provided for illustration and are applicable for single anchors installed in normal-weight concrete with minimum slab thickness, ha = hmin, and with the following conditions:

-  $C_{a1}$  is greater than or equal to the critical edge distance,  $C_{ac}$  (table values based on  $C_{a1} = C_{ac}$ ).

Ca2 is greater than or equal to 1.5 times Ca1.

2- Calculations were performed according to ACI 318 (-19 and -14), Chapter 17. The load level corresponding to the controlling failure mode is listed. (e.g. For tension: steel, concrete breakout and pullout; For shear: steel, concrete breakout and pryout). Furthermore, the capacities for concrete breakout strength in tension and pryout strength in shear are calculated using the effective embedment values, her, for the selected anchors as noted in the design information tables. Please also reference the installation specifications for more information.

3- Strength reduction factors (ø) were based on ACI 318 (-19 and -14). Section 5.3 for load combinations. Condition B is assumed.

4- Tabular values are permitted for static loads only, seismic loading is not considered with these tables.

5- For designs that include combined tension and shear, the interaction of tension and shear loads must be calculated in accordance with ACI 318 (-19 and -14), Chapter 17.

Interpolation is not permitted to be used with the tabular values. For intermediate base material compressive strengths please see ACI 318 (-19 and -14), Chapter 17. 6-For other design conditions including seismic considerations please see ACI 318 (-19 and -14), Chapter 17.

HWH = Hex Washer Head (slotted); PFH = Phillips Flat Head; SFH = Star Flat Head

- Shaded grey catalog numbers denote sizes which are less than the standard anchor length for strength design.

\* Catalog numbers with an asterisk denote sizes that meet the minimum anchor length requirement for strength design provided the fixture attachment does not exceed 0.036-inch (0.91mm) in thickness.

\*\* For HWH and HFH anchors, the approximate thread length is 1/8" longer than the tabulated thread length

- Hex Washer Head and Hex Flange Head UltraCon+ anchors are measured from below the washer. Phillips Flat Head and TrimFit Flat Head UltraCon+ anchors are measured end to end.

- To select the proper minimum anchor length, determine the nominal embedment depth (e.g. required to obtain desired load capacity). Then add the thickness of the fixture, including any spacers or shims, to the embedment depth.

HWH = Hex Washer Head (slotted); HFH = Hex Flange Head; PFH = Phillips Flat Head; SFH = Star Flat Head; PTFH = Phillips TrimFit Flat Head; STFH = Star TrimFit Flat Head; - Shaded grey catalog numbers denote sizes which are less than the standard anchor length for strength design.

r catalog numbers with an asterisk denote sizes that meet the minimum anchor length requirement for strength design provided the fixture attachment does not exceed 0.036-inch (0.91mm) in thickness.

\*\* For HWH and HFH anchors, the approximate thread length is 1/8" longer than the tabulated thread length

- Hex Flange Head Anchors are not covered by ICC-ES ESR-3068, ESR-3196, or ESR-3042. TrimFit Flat Head Anchors are not covered by ICC-ES ESR-3042.

- Hex Washer Head and Hex Flange Head UltraCon+ anchors are measured from below the washer. Phillips Flat Head and TrimFit Flat Head UltraCon+ anchors are measured end to end.

To select the proper minimum anchor length, determine the nominal embedment depth (e.g. required to obtain desired load capacity). Then add the thickness of the fixture, including any spacers or shims, to the embedment depth.

### UltraCon+ Drill Bits

Cat. No.	Description
DW5381	5/32" x 7" UltraCon+ SDS bit
DW5382	3/16 x 7" UltraCon+ SDS bit
DFX153255	5/32" x 5-1/2" UltraCon+ straight shank bit
DFX131645	3/16" x 4-1/2" UltraCon+ straight shank bit
DFX131675	3/16" x 7-1/2" UltraCon+ straight shank bit

## **Installation Kit**

Cat. No.	Description
DW5366	UltraCon®+ Installation Kit includes: 5/32" and 3/16" Ultracon+ Bit 1/4" and 5/16" NutSetters T25 and T30 Star Bit Flathead Adapter Percussion Adapter Drive Sleeve 1/8" Allen Wrench

#### **Rotary Hammers**

Cat. No.	Description		
DCH172	20V Max* 5/8 in. Brushless Cordless SDS Plus Rotary Hammer		
DCH133	20V Max* XR Brushless 1" D-Handle SDS Plus Rotary Hammer		

#### Accessories

Cat. No.	Description
DWH303DH	Onboard Dust Extractor for 1" SDS Plus Hammers
DWH200	Dust Extraction Tube Kit with Hose

#### **Dust Extractors**

Cat. No.	Description
DCV585	Flexvolt <sup>®</sup> 60V Max* Dust Extractor
DWH161D1	20V Max* XR Brushless Universal Dust Extractor Kit
